1. Introduction – aim and background

Aim of the project This project has aimed to create a register of Danish Family Businesses (DFBD) 2005-2014 and develop a method to be used for future production of statistics about family businesses. The results can provide policy makers and other stakeholders with statistical knowledge about the magnitude and development of family owned businesses in Denmark. In order to not increase administrative burden on SMEs, this project has solely utilized existing administrative or statistical registers.

Background Official statistics on family businesses has never been produced by Statistics Denmark. Enterprises have traditionally been described and grouped according to information about their legal form, activity, size class and/or ownership.

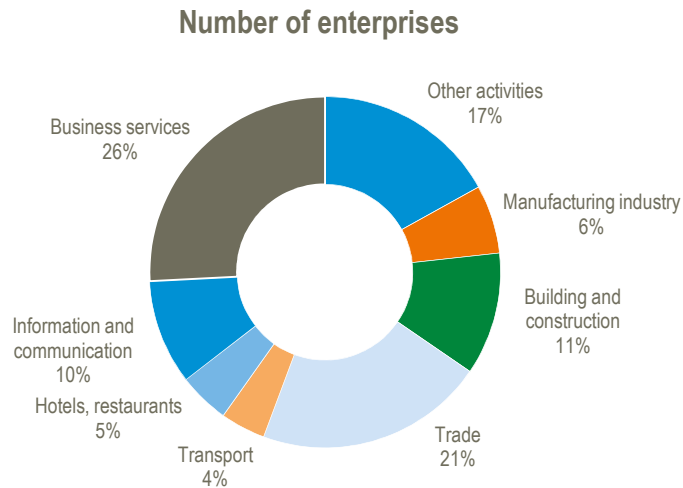

Administrative registers do not contain the necessary information needed to identify family owned enterprises but a new administrative register has been established in 2015 holding information about the direct owners of companies. This register was planned to constitute the backbone of the project but access to the register has only been possible very late in the project period. Consequently this register is only used as the basis for the production of the statistics for 2014. It has therefore as an alternative for the period 2005 – 2013 been necessary to establish an approach/method that combines a number of additional data sources and variables founds in different registers. These registers are described in chapter 5.

2. Statistical results

2.1 Danish Business Structure 2014

The Danish business sector¹ is dominated by the services sector as approximately one out of four businesses are found in business services (book-keeping, lawyers, consultants etc.), and an almost equal share (21 per cent) is made up of businesses within trade. At the other end, manufacturing enterprises only constitute 6 per cent of all enterprises and enterprises within building and construction 11 per cent, cf. Figure 1.

Figure 1 Number of enterprises by industry. 2014

Looking at the value added created in 2014, we find a different pattern as 24 per cent was created by manufacturing industry, and an almost equal share (20 per cent) from trade, whereas the contribution from business services was only 15 per cent, cf. Figure 2.

Figure 2 Value added by industry. 2014

¹ Defined in this project according to the Structural Business Statistics Regulation, which includes enterprises in NACE activities 05-09, 10-33, 35-39, 41-43, 45-47, 49-53, 55-56, 58-63, 68, 69-75, 77-82 and 95.

Enterprises in trade and manufacturing account for nearly half (25 per cent and 22 per cent, respectively) of the employment, measured as number of full-time equivalent employees, and they account for an even larger share of turnover (37 per cent and 22 per cent, respectively), cf. Table 1.

Businesses within transport represent 4 per cent of the enterprises, but approximately 10 per cent of employment, turnover and value added. The opposite situation can be seen for business services, accounting for 26 per cent of the enterprises, but only 16 per cent of employment, 15 per cent of value added and 8 per cent of turnover in 2014.

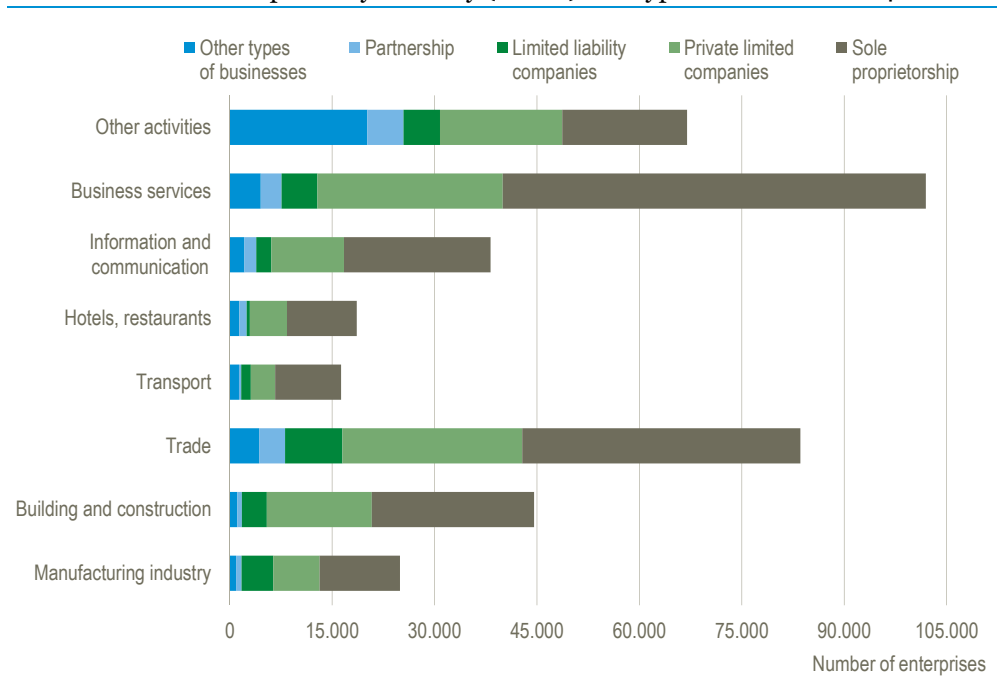

Table 1 Number of businesses, full-time employees, turnover and value added. 2014

	Number of enterprises	Number of full-time equivalents	Turnover,	Value added,	Export
	All		Mil. DKK		
Manufacturing industry	24 932	258 862	767 605	222 128	400 632
Building and construction	44 602	121 667	212 579	71 622	4 880
Trade	83 601	300 327	1 300 624	182 372	288 635
Transport	16 327	118 112	400 622	97 620	240 107
Hotels, restaurants	18 612	52 188	53 031	22 004	1 326
Information and communication	38 223	86 127	169 206	76 690	27 576
Business services	101 968	196 438	293 909	138 895	67 461
Other activities	66 996	56 886	350 253	112 270	89 591
All	395 261	1 190 607	3 547 829	923 601	1 120 208

Sole proprietorship is the most common legal form, accounting for 50 per cent of all enterprises in general, and even more in business services, transports and building and construction. Referring to the definition of family-owned businesses, this structure indicates the importance of family-owned businesses in terms of numbers – alone based on the legal form.

Private limited companies are also widespread as legal form, though most frequently used within building and construction and trade (approximately 33 per cent).

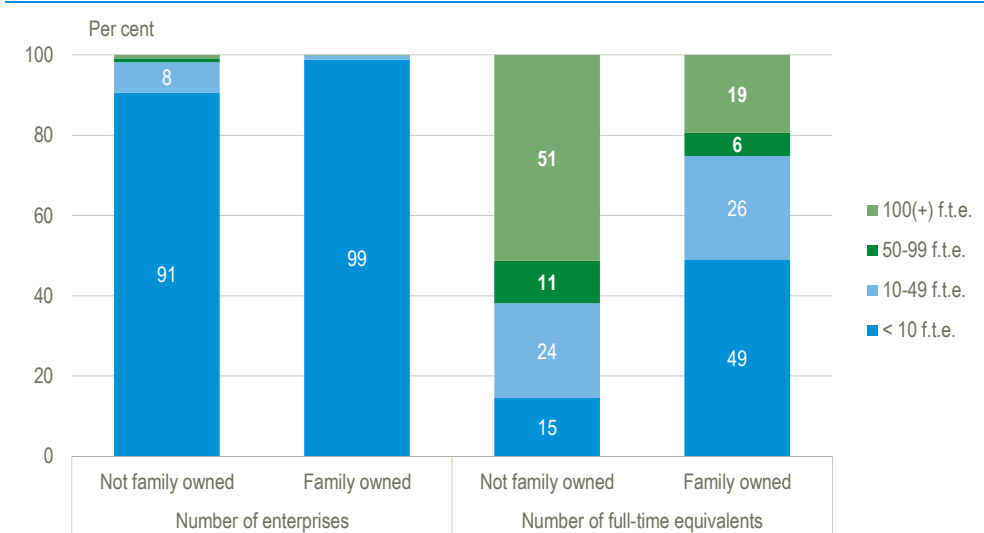

Figure 3 Total number of enterprises by industry (NACE) and type of business. 2014

2.2 Profile of Danish Family Businesses 2014

Taking a closer look at family owned vs. non-family owned enterprises by size class structure, this reveals a significant difference between the two types of businesses, cf. Figure 4. The tendency of small businesses to dominate the number of enterprises is even more significant for family owned businesses, as 99 per cent employ less than 10 full-time equivalents, compared to 91 per cent of non-family owned enterprises. When comparing the share of employment in the two types of businesses, this shows that non-family owned enterprises with 100 or more employees account for 50 per cent of the total employment in not family-owned businesses, whereas only 19 per cent of the employment in family owned enterprises are found in the enterprises with 100 or more full-time equivalent employees.

Figure 4 Share of businesses and full-time employees by size class. 2014

Family owned enterprises are dominant in terms of numbers in most industries, but especially within business services (72 per cent) and transports (68 pct.).

The use of different legal forms vary across industries, as seen from figure 5 (sole proprietorships are left out as they account 100 per cent as family owned). The general picture is that private limited companies are the second-most legal form after sole proprietorship, except for hotels and restaurants, where partnerships are more widely used.

Figure 5 Share of family owned businesses by activity and legal form. 2014

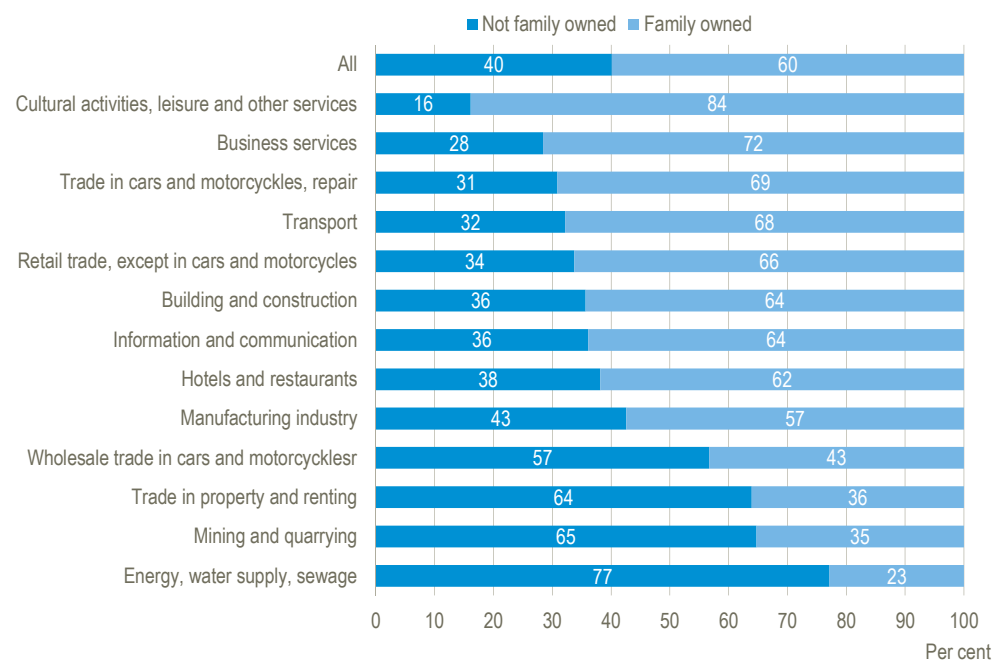

Not surprisingly, a distribution of family owned businesses by size classes reveals that family owned businesses are dominant only in the smallest size class of micro enterprises with less than 10 FTE (constituting 62 per cent of all enterprises in this size class) compared to only 6 per cent of all larger enterprises with more than 100 FTE, cf. Figure 6. That pattern can be found across sectors – with the main exceptions found for the size class of smaller enterprises with 10-49 FTE in transport (34 per cent are family owned) and hotels and restaurants (24 per cent).

Figure 6 Share of family owned businesses by activity and size class. 2014

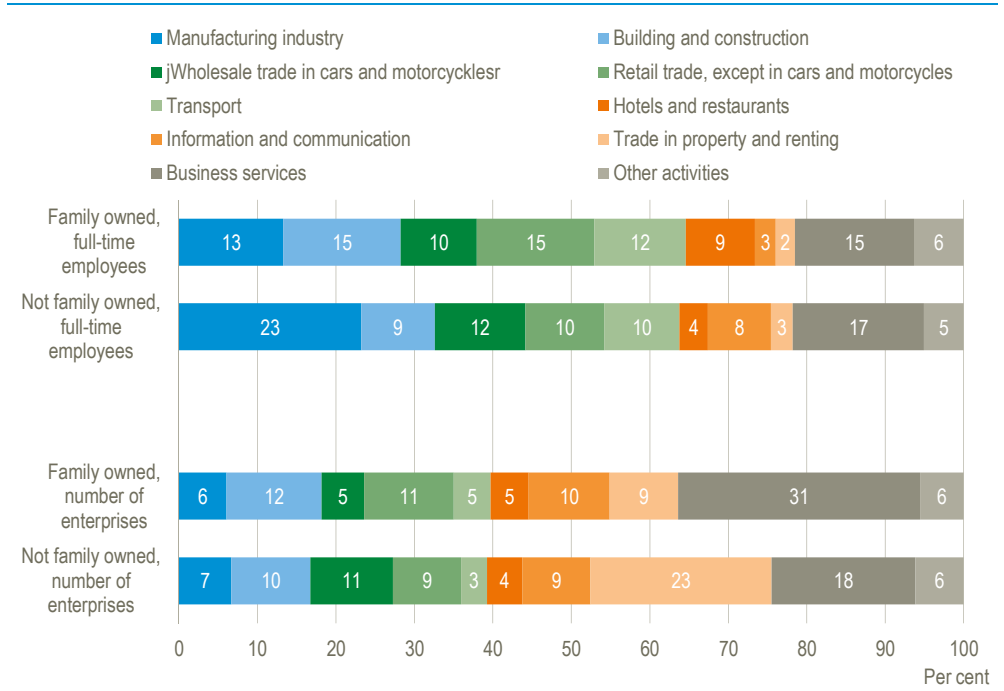

In general, 60 per cent of all enterprises within the non-financial market sector was family owned businesses, cf. Figure 7. The share varies across activities as more than 84 per cent of all enterprises within cultural activities is family owned, followed by business services (72 per cent). At the other end, only 23 per cent of all enterprises within supply of energy and water was family-owned and also wholesale with cars shows a relatively low share of family owned businesses (43 per cent).

Figure 7 Share of enterprises by activity. 2014

Looking at the distribution of employment across sectors, Building and construction represents a relative larger share of employment in family owned businesses compared to not family owned businesses, cf. Figure 8. The same pattern can be found for Hotels (9 vs. 4 per cent) and Retail (15 vs. 10 per cent). The opposite pattern can be found for manufacturing where the family owned businesses only constitute 13 per cent of total employment compared to 23 per cent for the not family owned businesses. Also Information and communication shows a relatively minor share of total employment in family owned businesses (3 per cent) compared to not family owned businesses (8 per cent).

Figure 8 Distribution of number of enterprises and full-time equivalents. 2014

2.3 Development in Family Businesses 2005-2013

As the Owner Register was established in 2015, we have found it reasonable to “import” the information available for 2015 to also be valid for 2014. This means that we have decided it possible to chase not only the direct owner but to identify the ultimate owner of groups as well. This method means that we have a very good coverage of family owned businesses for 2014 while for the previous years will have to use only the information available about the direct owner. Due to this reason only some general trends concerning the development of family owned businesses are analyzed further in this chapter.

In general, the family owned business only grew with 7 percentage points in the period 2005 to 2013 compared to a growth of 28 percentage points for the not family owned businesses in the same period, cf. Figure 9.

Figure 9 Development in number of enterprises. 2005=100

Looking at the development in employment (FTE) in the period 2005 to 2013, it is obvious that the family owned enterprises never have regained the job losses due to the economic crisis in 2009, as a continuous decrease in employment can be observed – in total a decrease of 31 percentage points in the period 2005 to 2013, cf. Figure 10. For the not family owned businesses, we can observe a sharper drop in employment from 2008 to 2009 but these enterprises have slightly regained employment in the years since 2010; now being at the same level of employment in 2013 as in 2005.

Figure 10 Development in number of full-time equivalents. 2005=100

Also when it comes to value added creation, the family owned businesses are characterized by a decline – with 21 percentage points in the period 2005 to 2013, cf. Figure 11. This development has been profound with a sharp decline after 2010. Again the not family owned businesses are characterized by having regained the loss in value added creation after the crisis started in 2008. The total growth in value added creation is 28 percentage points in the period 2005 to 2013.

The overall conclusion is that since 2005 – and especially since the start of the economic crisis – the family owned businesses have lost in importance; both concerning job and value added creation.

Figure 11 Development in value added (current prices). 2005=100

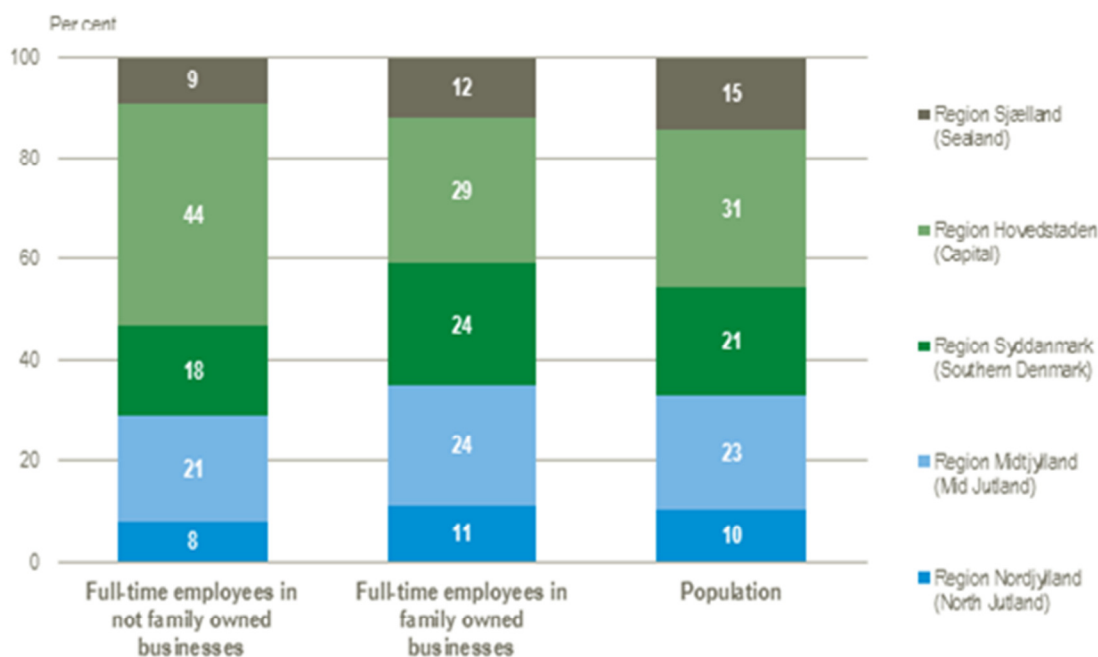

Figure 12 Number of enterprises by region. 2014

A distribution by regions shows that family owned businesses are more evenly spread across the five Danish regions than not family owned businesses. It is important to notice however, that the data is based on businesses as legal units, and the legal units are geographically placed in the region where the head office is located. As many larger enterprises with several local units across the country tend to have their main office in the capital region, distributions of number of enterprises, employment etc. will show a higher share located in the capital region, than is actually the case in the “real world”.

Figure 13 Number of full-time employees and population by region. 2014.

2.4 Technical results

The Owner Register has proven valuable in combination with a range of other registers in Statistics Denmark to analyse ownership of enterprises. The Owner Register is expected to gain in quality by time, as it has become compulsory to enter specific information from June 2015. Enterprises have to register their information by themselves, which gives way to omissions and misunderstandings, but in general the quality is evaluated to be high.

There is a broad range of information about the enterprises as well as on their owners and management in the Owner Register. It has not been possible to explore and make use of all these information within the limits of this project - due to the delayed access to the register which was only obtained late 2016, but the register is expected to have a large potential for analyses of structures of ownership, within the individual enterprise and enterprise group, but also across enterprises, which is made possible by the unique combination of enterprise ID and ID of persons within the enterprise.

2.5 Possible improvements and refinements

During the last steps of the project, it has become clear that the Family Business Register may be improved and refined in order to be an even more precise base for providing statistics on family owned businesses. In most cases the improvements are foreseen to expand the stock of businesses categorized as “family owned”. Among these possibilities are:

- An option to broaden the definition of “a family” by using the Population Register more in-depth, e.g. defining a grandparent and grandchild as family even though a parent of the grandchild is not involved in the business.
- Make more use of the information from the Owner Register, such as the role of the individual persons involved. Having in mind point c in the definition of family businesses adopted by The Commission “At least one representative of the family or kin is formally involved in the governance of the firm”, it may be investigated further how to use the roles attached to

natural persons in the Owner Register concerning private limited companies and limited liability companies for statistical purposes.

- Pre-define important enterprise groups of family/non-family businesses: A relatively small, but in economic terms important, group of Danish enterprise groups are known to be owned by a single family. Not all of these will be identified via the programs used for this project, as they have one of the “top” enterprises registered abroad, whereby the chain of identifiable enterprises in the group is broken. These enterprises are typically large, and are therefore likely to be included in Statistics Denmark’s program on ‘forretningskritiske enheder’ ? business critical units ??? If this program would adopt the idea of “family business” it will be easier to identify those in the future.
- Identify persons employed within the same family that controls an enterprise. This will be possible by linking the statistics to employment statistics.

Statistics Denmark aims at implementing point 2 above – more use of the information from the Owner Register – in the family businesses database during 2017. The focal points of the work are:

- To establish a consolidated and quality secured database on family businesses
- To establish data, that allows for analyses of the share of family businesses that has a potential of family/generation succession.

2.6 Sustainable statistics

Statistics Denmark has provided a solid documentation of the methodology and electronic programmes used in this project, thereby ensuring the basis for sustainable statistics.

At the time being, Statistics Denmark has no plans to publish an annual statistics on family businesses. But the data base on family businesses has already proved to be of interest for researchers and Statistics Denmark has initiated discussions with a research team concerning the provision of the data base for future research projects.

3. Definitions

3.1 Definition of family businesses by the Commission

In this project family businesses have been defined using the definition adopted by the European Commission in 2007, as specified in the grant call:

Definition adopted by the European Commission

- a. The majority of decision-making rights are in the possession of the natural person(s) who established the firm, or in the possession of the natural person(s) who has/have acquired the share capital of the firm, or in the possession of their spouses, parents, child or children's direct heirs.
- b. The majority of decision-making rights are indirect or direct.
- c. At least one representative of the family or kin is formally involved in the governance of the firm.
- d. Listed companies meet the definition of family enterprises if the person who established or acquired the firm (share capital) or their families or descendants possess 25 per cent of the decision-making rights mandated by their share capital.

a. Definitions adopted by Statistics Denmark

Family owned business

Four business types constitute the base

Statistics Denmark has identified four business types where natural persons may be identified as owners:

- Enterprises with personal ownership:
 - Sole proprietorships
 - Partnerships
- Private limited companies
- Limited liability companies

Each of the four types can be identified in the Business Statistics Register.

Sole proprietorship

Sole proprietorships are per se family businesses, cf. the definition adopted by The Commission.

Partnerships

Partnerships have 2 or more individual persons as owners. There is no information available on the individual person's role or function in the partnership. In this project a partnership is defined as a family business if 2 or more persons belonging to the same family constitute more than half of the individual owners.

Private limited companies and limited liability companies

For private limited companies and limited liability companies more information is available on the owners, such as type of owner (physical or legal person), their share of votes defined as percentages in intervals, their role or function in the enterprise. All variables concerning the owners are linked to variables defining from and to date for which this is valid. This information is extracted from the Owner Register.

Rules for the definition of 'family owned'

For a private limited company or a limited liability company to be defined as family owned, one of the following rules must apply:

- A business owned by a single person: The participant is a natural person, and number of persons involved=1 and share of votes \geq 50 per cent.
- A business solely owned by a single family: The participants are natural persons and number of persons involved \geq 2 and number of persons involved=the maximum number of persons in a family.

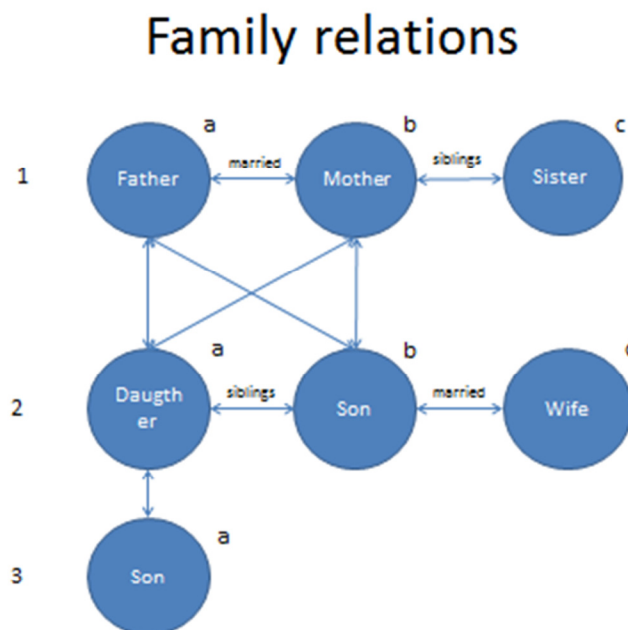

- A business involving more than one family, but the largest family constitutes the majority of persons involved and has the majority of votes: The participants are natural persons and the maximum number of persons in a family > (number of persons involved/2) and (number of persons involved > the maximum number of persons in a family) and share of votes >=50 per cent.

Definition of family

Family

Underlying these delimitations of family businesses is the definition of ‘a family’. Via The Population Register, the owners of the different types of businesses have been supplied with information on their parents’ identity and their family number (see chapter 5.3 for details on The Population Register). Using these information makes it possible to identify family members, which is restricted to grandparents, parents, children, and their spouses/cohabiting partners. The figure below illustrates the relations covered, and how they are identified.

Family relations included

- The family relation between 1a/1b and 2b/2c (married/co-habiting) are identified via the same family ID
- Family relations between 1b/1c and 2a/2b (siblings) are identified via same identity of mother and/or father
- The family relation between 2a og 3a is identified via the son having the ID of his mother attached
- In the case a link is skipped, e.g. a grandparent and his grandson are involved in the business, but not the mother or father of the grandson, they are not identified as a family in this project.
- One may also discuss whether the definition of a family should be extended further, e.g. including cousins, great cousins, great uncles etc. Both of the two last examples could be solved by using The Population Register more extensively than has been the case in this project. These types of relations in businesses are believed to be much less frequent than those included, though.

As it appears, the definition of family businesses applied by Statistics Denmark more or less falls under point a and b of the definition adopted by The Commission (The majority of decision-making rights are indirect or direct).

4. Technical description

4.1 Registers used for establishing the Family Business Register

4.1.1 The Statistical Business Register

The Statistical Business Register

The SBR covers the administrative units from the Danish Central Administrative Business Register (CABR), the statistical units required by EU - e.g. the economic unit, the taxation units as well as the relations between the units over time - also called business demography. The SBR has data on approximately 800.000 observations. However, due to the low threshold for VAT registration in Denmark as well as the fact, that inactive enterprises remain being registered, only about 300.000 enterprises have economic activity corresponding to more than one half-time employee.

SBR's main data source is CABR. Denmark has only one CABR with a unique identification of local business units, the 8-digit CVR number.

Primary data suppliers are Danish Business Authorities and ministries e.g. the Danish Business Authority and the Tax Authority. All public authorities are obliged to use the CVR number, when corresponding with enterprises.

Thanks to the introduction of a new income register in 2008 (e-Income), it is now possible to link every employee to an enterprise (Local kind of Activity Unit).

The coverage of SBR is considered very close to 100 per cent. Primary data sources are authorities with their own interest in timely update of the register, which increases the quality of this register.

4.1.2 Structural Business Statistics (SBS)

Structural Business Statistics

In Statistics Denmark SBS' primary source is the questionnaire based Account Statistics. The Accounts Statistics in Statistics Denmark primarily are based on legal units. Only about 20 enterprises consist of more than one legal unit.

The Accounts Statistics and the SBS population do not cover inactive businesses. The threshold limit regarding the level of economic activity required means that an enterprise should have had an annual performance corresponding to at least a half year's work for one person.

The Accounts Statistics, from which the SBS data are drawn, contains collected or imputed variables for all legal units in the statistics.

Indicators included in the Family Business Database:

- Number of enterprises
- Number of full time equivalent employees
- Turnover (DKK)
- Value added (DKK)
- Exports (DKK)

4.1.3 The Central Population Register (CPR)

The Central Population Register

Population statistics produced by Statistics Denmark are based on the Central Person Register (CPR). The CPR is an administrative register meaning that the municipalities themselves have an interest in keeping the quality of the register on a high level. CPR is updated on daily basis. Analysis has shown that the quality of the CPR content is very good. In the population register the following information for each person who lived in Denmark at the beginning of the year can be found: PNR (person ID), Address, Marital status, PNR (person ID) for father, PNR (person ID) for

mother, Age, Place of birth, Sex, Citizen code, Christian and Surname, Municipal code, etc.

Indicators to be included in the Family Business Database:

PNR (person ID)

Age

Gender

Family type

PNR (person ID) for father,

PNR (person ID) for mother

Familie_ID (Family_ID)

Connecting a person with his or her closest family members has made it possible to identify other family members e.g. siblings, children, parents, grandparents and spouses/partners co-habiting without being married.

4.1.4 The Public Owner Register

The Public Owner Register

When Statistics Denmark planned this project it was the expectation to be able to use the newly established register about ownership, called the 'Owner register'. This register was scheduled to be operational at the end of 2015, but was not available for this project until January 2017.

Background

From December 2014 and onwards, all Danish private (limited) companies (in Danish A/S and ApS) including entrepreneur companies must register information about those owners, who own 5 per cent or more of the share capital or the voting rights in the Public Owner Register.

The introduction of the Owner Register forms part of the company legislation adopted in May 2009. The purpose of the law is to increase openness and transparency concerning the owner structures of Danish companies. The register shall insure that Denmark complies with EU-regulations and recommendations to discourage laundering.

Interim arrangement: To ensure the best possible introduction of the Owner Register in interim arrangement has been introduced for companies existing on the time of the opening of the register 15th December 2014. Hereby companies established before 14th December 2014 has had a respite to register their ownership relations until 15th June 2015. It is important to note, that also companies, where no one owns 5 per cent or more of the share capital or voting rights are liable to register this in the Owner Register.

The regulation concerning the Owner Register applies to private (limited) companies (A/S and ApS), including entrepreneur companies (iværksætterselskaber (IVS)), partnerships (P/S) and European limited companies (SE). These types of companies are liable to register their ownership information in the Public Owner Register.

Information that must be registered

Information to be registered in the Owner Register

As a minimum the following information must be entered into the register:

- The total possession of the owner of capital shares and voting rights if 5 per cent or more. If the share capital is divided into classes, this information must also be entered.
- Date of acquisition or disposal of capital shares
- Identification of the owner, including
 - Name
 - Address

- CPR-number (personal unique identification number) if the owner is a physical person
- CVR-number (unique identification number for enterprises) if the owner is another company
- registered office
- For foreign persons or legal persons a unique identification number corresponding to the CPR-number or the CVR-number must be entered.
- Indirect ownership must also be registered, e.g. if an owner through a subsidiary enterprise where he or she has a determinative influence, has a disposal of votes or capital in the company. In this case the owner must include the subsidiary shares when calculating the total owner shares of the votes or capital.

4.1.5 Enterprise Group Statistics Register

*Enterprise Groups
Statistics Register*

Enterprise groups in Denmark is an annual, register-based statistics, which is initially carried through regarding the year 2009. The purpose with the statistics is to describe the activities in Danish companies in a greater and broader perspective. Thus the statistics contributes to the description of the business structure in Denmark.

The statistical unit is the "Enterprise Group". An enterprise group, in this statistics, is regarded to be two or more companies located in Denmark and at the same time have a mutual ownership. A mutual ownership is regarded to be present if one Danish company owns and/or controls more than 50 per cent of another Danish company.

This register has been used to identify whether the ultimate owner in an enterprise group is family – and hence to identify all enterprises in the group as family owned.

4.2 The Family Businesses Register

*Content of the Family
Business Register*

The Family Business Register established includes the following information extracted through linking business and social statistics registers:

- ID no. of the enterprise
- Number of full time equivalent employees
- Economic Activity (NACE)
- Turnover
- Value added
- Exports
- Members of the firm's governance/management board
- Relationship to the enterprise
- History of involvement with the enterprise
- Age
- Gender
- Type of family
- PNR (person ID) for father
- PNR (person ID) for mother
- Family_ID
- Percentage of share capital /votes

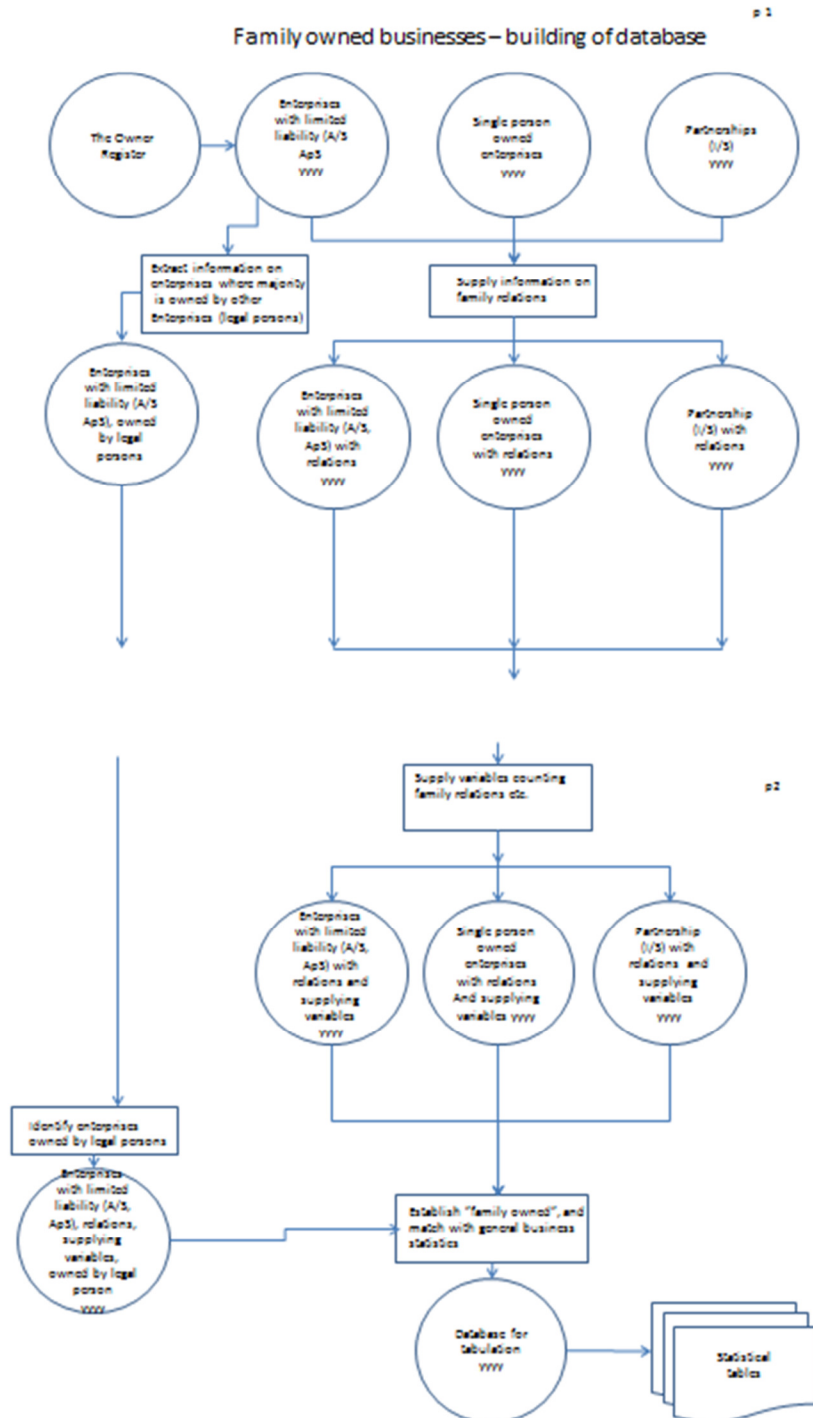

Besides these basic variables, a number of supplying variables are added to the database:

- Number of persons registered in the enterprise as founders, shareholders or members of the board
- Number of families involved in the enterprise
- Number of persons with family relations in the enterprise
- Number of family members in the largest family involved in the enterprise

- Sum of share capital/votes per family

Future use Now established, the Family Business Register is expected to be a useful source of information for analyzing family enterprises in general, the strengths and weaknesses of these firms compared to non-family owned enterprises, possible challenges and potentials. More specifically, questions regarding gender, education background, challenges related to generational succession, etc. can be investigated.

Chart of the construction of The Family Businesses Register

The steps in the processing of data

Step 1: ID information on natural persons in sole proprietorships and partnerships is drawn from the Business Statistical Register.

Step 2: ID information on natural persons in companies with limited liability and in private limited companies was extracted from the Owner Register.

Step 3: Background information on the ID numbers on persons from step 1 and 2 was added by matching with the Central Person Register including ID of parents and family ID.

Step 4: On the three types of files (sole proprietorships, partnerships and companies with limited liability/private limited companies) counts were made on number of persons involved, numbers of families involved, the largest family size and its sum of votes (where available).

Step 5: From the Owner Register information on legal persons (other enterprises, foreign enterprises and public institutions) owning the majority (50 per cent or more) of the votes in another enterprise were extracted.

Step 6: The three types of files from step 4 were then matched with Structural Business Statistics and with the file on legal persons owning an enterprise. The result is one file per year 2005-2013 covering family owned as well as all other types of businesses covered by the Structural Business Statistics.

Step 7: Tabulations made on each year 2005-2013.
